

Built by Experts, Supported by Experts

From installation through upgrades & ongoing service, Testek supports your equipment throughout its entire lifecycle.

The Testek Service Difference

Testek Solutions provides comprehensive service and support to keep your test equipment operating reliably throughout its lifecycle. Backed by in-house experts with direct design and commissioning experience, our team understands how your equipment operates as a complete system and provides the responsive support needed to keep testing moving.

**Customized
Approach**

**Regional
Support**

**Engineering-
Backed Service**

Service Designed for Your Operation

Every test operation has different demands. Get support for your system and priorities, with service from Testek experts who understand your equipment. Our regional presence helps make that expertise more accessible when and where you need it.

Service

From repairs and troubleshooting to preventive maintenance, calibration, remote support, and onsite staffing, Testek provides the expertise needed to keep your test systems operating reliably, minimize downtime, and reduce disruption to testing schedules.

Upgrades

Testek helps extend the life of your equipment, support evolving requirements, and maintain reliable performance without replacing your entire test system through upgrade services including hardware and software updates, system modernization, and obsolescence mitigation.

Expand Your System Capabilities

As your testing needs evolve, Testek can also help extend the value and capabilities of your existing equipment through hardware and software upgrades, obsolescence planning, and new test configurations. This lifecycle approach helps you maintain system reliability, reduce disruption, and adapt your test capability without replacing equipment unnecessarily.

About Us

Testek Solutions guides aerospace OEMs and MROs to build, expand, and modernize test capability across aircraft systems, nose-to-tail. Our upgradeable, turnkey test solutions are proven from baseline platforms to complex programs. Through program-aware partnership, engineering-led scoping, and continuity from design through commissioning, we help customers define the best technically acceptable path with fewer surprises and provide expert support for lifecycle sustainment.
